

KIRKKO

COMPANY

PROFILE

WELCOME TO OUR COMPANY

Kirkko specializes in innovative safety installations for homes and businesses, offering solutions like invisible grills, pleated mesh, and honeycomb mesh that enhance security without compromising aesthetics. Our products provide uncompromised safety, durability, and modern design, making them ideal for high-rise apartments, offices, and commercial spaces. For example, our invisible grille systems protect occupants from falls and keep out intruders or pests, all while remaining nearly invisible and preserving your view. By seamlessly blending security with elegance, Kirkko's ensure that safety goes hand-in-hand with the architectural appeal of your property.

VISION & MISSION

Vision

To be a market leader in modern safety and protection systems (invisible grill), known for our commitment to safety, innovation, and design excellence. We envision safer living and working spaces across urban landscapes, where Kirkko's installations are synonymous with trust and elegance.

Mission

To deliver cutting-edge safety solutions that integrate security with style, protecting people while enhancing the beauty of homes and businesses. We strive to continuously innovate and provide high-quality products that set new standards in modern safety installations.

INVISIBLE GRILL

- Invisible grills use thin, high-tensile steel cables to create a virtually transparent barrier, providing robust fall protection without blocking views.
- The grill system consists of 2.5 / 3 mm 304 / 316 grade stainless steel nylon coated wire anchored on sturdy Aluminium tracks of 6063 grade, making it rust-proof and long-lasting.

STAINLESS STEEL WIRE

7x7, NON-FRAYING ROPE

ALUMINUM TRACK -6063 GRADE

INVISIBLE GRILL

- **Features:** Unobstructed views, high tensile strength (supports heavy impact), weather-resistant and rust-proof, enhances modern aesthetics
- **Use Cases:** Ideal for windows, balconies, high-rise railings, and staircase enclosures where fall prevention and security are needed without bars or grills

PLEATED MESH

- Pleated mesh is a retractable insect screen that folds away neatly when not in use. It features a folding accordion design, allowing the mesh to collapse compactly to one side, thus maximizing open space and ventilation
- The frame is made from high-strength Virgin Aluminium 6063 alloy and the mesh from premium polyester, ensuring the system is lightweight, UV-resistant, and durable against regular use. The pleated mesh is wind-resistant and easy to maintain

ALUMINIUM BODY

MESH

PLEATED MESH

- **Features:** Retractable design slides open effortlessly, insect protection (keeps out mosquitoes and bugs), provides some UV shielding and shade wind-resistant structure, and smooth operation
- **Use Cases:** Perfect for doors, windows, balconies, and French door openings – especially large spans where a traditional fixed screen would be impractical. When open, it offers an unobstructed passage; when closed, it safeguards your interiors from insects and dust.

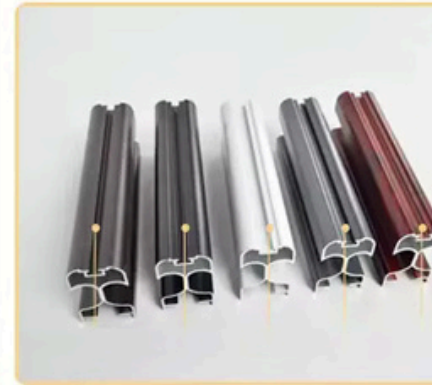

HONEYCOMB MESH

- **Features:** Lightweight yet strong, corrosion-resistant, low-maintenance, allows airflow and light, modern geometric design, and impact protection.
- **Use Cases:** Can be used as security screens on doors/windows, ventilation panels (allowing air circulation while keeping pests out), and decorative architectural elements or partitions that double up for safety. Common in areas requiring both security and ventilation, like server rooms, AC vents, or as stylish room dividers in offices and homes
